

Menu ChatBot

Question-answering system over structured restaurant data

OBJECTIVE

Build a chatbot that answers natural language questions about a restaurant menu. The menu data (JSON, ~400 KB) includes items, categories, prices, nutritional information, discounts, taxes and service charges.

EXAMPLE QUESTIONS

What is the price of a small NUTTY BOWL?

How many calories does the GO GREEN smoothie have?

Which salads do you have?

What discounts are available today?

Which discounts include coupons?

What items trigger a BOGO Any Smoothie discount?

Is the price for Smoothie - ACAI ELIXIR the same in all channels?

DELIVERABLE

A runnable solution (Google Colab or equivalent) with clear explanations of design decisions, issues faced and tradeoffs taken. Conversational capability is optional. The menu JSON will be provided as an attachment.
